

lamaPLC: PCF857x I/O Expander chip/modul with I²C communication

The PCF857x series consists of I²C-based general-purpose I/O (GPIO) expanders manufactured by NXP and Texas Instruments. They allow microcontrollers (such as Arduino, ESP32, or Raspberry Pi) to control multiple digital pins with only two wires: Serial Data (SDA) and Serial Clock (SCL).

Feature	PCF8574 / PCF8574A	PCF8575
GPIO Count	8-bit (8 pins)	16-bit (16 pins)
I²C Base Address	0x20 (PCF8574) / 0x38 (PCF8574A)	0x20
Max Devices on 1 Bus	8 units	8 units
Operating Voltage	2.5V to 6V	2.5V to 5.5V
Interrupt Output	Yes (Open-drain INT)	Yes (Open-drain INT)
