Gas sensor moduls

The gas sensor modules contain the additional technology required for sensor ICs (voltage regulation, pull-up resistors,…) and the connection pins simplify the connection of the sensors to, for example,

Arduinos. The modules are typically universal and can be used for several sensors, so it's worth paying attention to which sensor is installed on the module, mainly because of the power supply (almost all sensors work with 3.3V, but not all of them work with 5V). There are often bridges used for addressing on the modules, which can be soldered in and out, and for example I²C addresses can be set with them.

 Temperature Humidity CO²	SCD-30 modul		SCD-30	Pinout: - VDD: Supply Voltage (-0.3 V –6.0V) - GND: Ground - TX/SCL: Modbus: Transmission line (Push/Pull with 3V level) I²C:Serial clock(internal 45kΩ pull-up resistor, pulled to 3V, for higher voltages a level shifter is needed) - RX/SDA: Modbus: Receive line (Input must not exceed 5.5V) I²C:Serial data(internal 45kΩ pull-up resistor, pulled to3V, for higher voltages a level shifter is needed) - RDY: Data ready pin. High when data is ready for read-out - PWM: PWM output of CO² concentration measurement - SEL: Interface selectpin. Pull to VDD(do not exceed 4V, use voltage divider in case your VDD is > 4V)for selecting Modbus, leave floating or connect to GND for selecting I²C The default I²C address of SCD30 is **0x61**

Software example

The easiest way to find the example program for the current sensor is in the Arduino program in the *"Library Manager"*.

Example to MQ-3 sensor to Arduino Uno
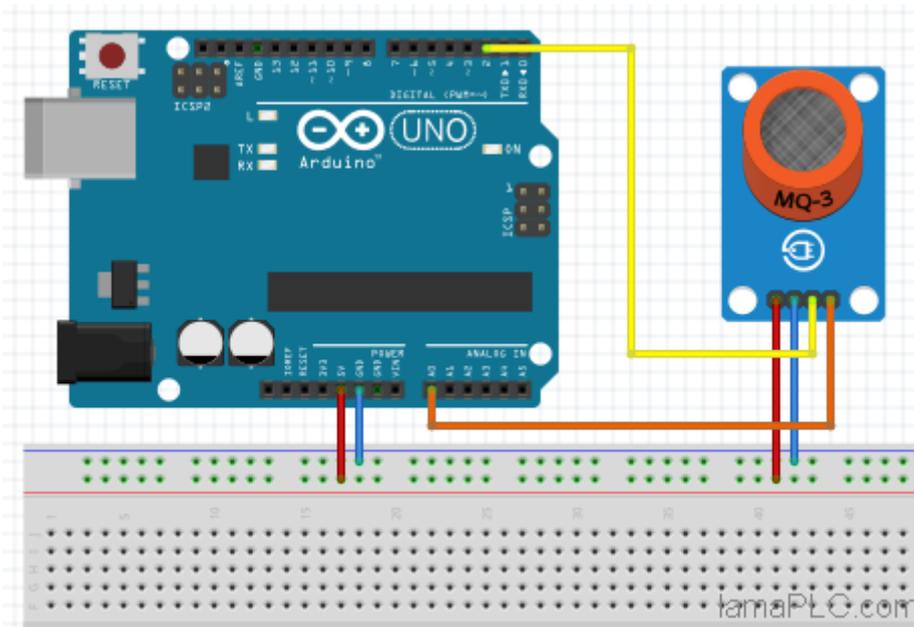

Arduino pin	Modul pin	Description
5 V	Vin	power supply can be 5V
GND	GND	-
D2	DO	Digital (alarm) signal from modul
A5	AO	Analog measuring value (0..5V)
